Komodo Dragon Life Cycle Activity Sheet

Draw a picture in each square to match the life cycle stage. You can number the squares into their correct order or cut and glue into order.

The female dragon digs a small hole.

The young dragons eats birds, snakes, and geckos until they are ready to leave.

The female buries the eggs.

The female lays between 15-40 eggs.

The young dragons will hatch and claw their way to the surface.

They will make their way to tree limbs.
